

## To connect to District Networks

Critical Cooling  
Direct Liquid Cooling  
Continuous Cooling

Pre-insulated PP-RCT pipe and fittings system, ideal for applications in which reduction of heat losses is essential.

**Specifically designed for HVAC distribution networks and chilled water production.**

The low thermal conductivity of the system allows high levels of thermal insulation to be obtained, with significantly reduced insulation thicknesses compared to other systems and materials.

Pipe diameter range from 63 mm to 315 mm.

### Technical advantages

- Energy efficiency.
- High resistance to corrosion.
- Low thermal conductivity.
- Abrasion resistance.
- Installation by electric welding with reduced installation times.
