

Safety in critical cooling and generators sets

## The solution for cooling towers

**Pipe developed for outdoor installations**, with high suitability in cooling tower condensate recovery circuits.

Made of PP-RCT composite with glass fibre **in SDR11 and SDR17**, with outer coating of PP-RCT with UV-resistant titanium dioxide additives.

Guaranteed product quality in compliance with specifications and requirements according to ASTM F2389 and NSF/ANSI Standard 14.

Pipe diameter range from 32 mm to 400 mm.

### Technical advantages

- No corrosion.
- High efficiency.
- Installation by electric and butt welding with reduced installation times.
- No subsequent surface treatment.
- Protection against solar radiation.
