

SMARTFLEX

Safety in the transfer of hydrocarbons

SMARTFLEX is a complete piping system that offers two alternatives according to the safety level of the installation:

- **Single wall system**

Primary pipe with state-of-the-art polyamide inner layer, impermeable and chemically stable in contact with hydrocarbon.

- **Double wall system**

The single wall system is complemented by a secondary PE100 high density polyethylene pipe, capable of sustaining the pressure of an automated leak monitoring system.

Technical advantages

- Leakage monitoring system.
- Impermeable barrier to hydrocarbons.
- High long-term pressure resistance.
- Low pressure drop.
- Excellent abrasion resistance.

Product quality certified by RINA according to EN 14125.
